QUESTION 07

How many "in-flight" hardening projects are based on the 2018 modeling top CPZ categorization? Were any "in-flight" hardening projects cancelled due to CPZ reprioritization?

ANSWER 07

There were 36 "in-flight" hardening projects totaling ~50 miles based on the "2018 modeling top CPZ categorization" (please note that we refer to this model as the 2019-2020 Wildfire Risk Model in the 2021 WMP). None of the "in-flight" hardening projects have been cancelled due to CPZ reprioritization based on the 2021 Wildfire Distribution Risk Model; they have all been postponed and are being re-evaluated on a weekly basis as the 2021 system hardening workplan is refined.
