

Congratulations!

Your SmartAC™ installation is complete

Being smart has its rewards

Not only will you be getting a check in 4–6 weeks, but you will support your community and the environment by helping to keep the grid cleaner and more reliable.

A SmartAC switch has been installed on or near your air conditioner.

The SmartAC season is May 1 through October 31. The SmartAC switch does not affect your heater.

During SmartAC Event Days, the SmartAC switch cycles your AC on and off every 15 minutes to conserve energy while your system fan continues to circulate air. Most customers do not notice when their SmartAC switch is active. If it is an inconvenient time, it's easy to return your air conditioner to its normal settings.

To opt out of a SmartAC Event Day call 1-866-908-4916

Have questions about your SmartAC switch?

To learn more about SmartAC visit **pge.com/sacswitch**. You can also call **1-866-908-4916**.

What to do if your AC isn't working properly

While it's not likely that your SmartAC switch is the cause of any problems with your air conditioner, please call us first at **1-866-908-4916**, and our technicians will troubleshoot the situation. If it's determined the problem isn't related to your SmartAC switch, we will recommend you consult with your local air conditioning service company.

Your AC Checkup is complete

Prior to installing your **SmartAC**[™] switch, our technician completed a five-step inspection of your air conditioning unit. This inspection was performed at no cost to you and is designed to ensure that your unit will not let you down when you need it most.
